

KB-115/116 Series
Bassinet Cart

celebrating
the start of a
beautiful life journey

The KB-115EG /116EG bassinet carts are the ideal tools of recuperation for the precious one, with their organic design taking inspiration from the leaves of nature.

<For Medical Personnel and Mothers>

Height and Inclination Angle Adjustment

The bassinet height can be adjusted (810 to 1,060mm) to allow for easy transportation and changing of diapers (KB-116EG only).

The Inclination angle can be adjusted (0-12 degree) by a gas spring lever operation to a desired position for easy handling and smooth motion (available in both models).

Usage Examples:

<During Transportation>

Easy-to-grip handles allow easy movement when transporting the baby. Medical personnel can adjust the bassinet to a comfortable height (KB-116EG only).

<During Diaper Change>

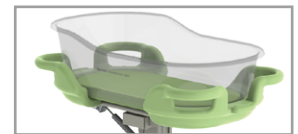

The low height setting allows the Mother to change the diapers from a seated position (KB-116E only).

<For Babies>

Clear Plastic Basket and Mattress

The clear bassinet basket allows total visibility without disturbing the baby. The wider opening and rounded corners of the bassinet basket make it easier to approach and care for the baby. A urethane foam mattress and name plate holder are also included.

Noise Reduction Casters

Smooth rotating 100mm dia. casters with stoppers at each corner provide quiet movement.

Specifications

Model No.	KB-115EG	KB-116EG
